REASONS FOR ALLOWANCE

1. Claims 3 and 5-7 are allowed.

The following is an examiner's statement of reasons for allowance:

- With regard to independent claims 3, 5, and 7, as the closest reference of record, the combination of Sato et al (US 6,392,980) and Furukawa et al (US 6,243,346) discloses a disk apparatus comprising: a stationary frame to be a stable portion, and a floating unit which is disposed in the stationary frame through elastic component and which performs recording and/or reproducing on a disk-shaped recording medium, wherein the floating unit includes a clamping member for holding the disk-shaped recording medium, and a disk recording/reproducing-driving member including a turn table, wherein the clamping member includes a clamper and a clamper-holding part, wherein the clamper includes a hook portion formed at the center portion of the clamper, and a projection which is formed on the center axis of rotation of the disk-shaped recording medium and which comes into contact with the clamper-holding part when the disk-shaped recording medium is held between the clamper and the turn table, wherein the clamper-holding part includes a claw portion for engaging with the hook portion near the internal position of the center hole of the disk-shaped recording medium held between the clamper and the turn table, wherein the hook portion of the clamper is fitted in an annular groove formed in a shaft portion of the turn table at its engaging position when the disk-shaped recording medium is held between the clamper and the turn table, wherein the shaft portion protrudes from the turn table for fitting in the positioning hole of the disk-shaped recording medium, the annular groove of the shaft portion is formed therein at a position which corresponds to the engaging position of the claw of the clamper-holding part with the hook of the clamper; **but fails to show** that the hook portion including a plurality of hooks formed at regular intervals on the same circumference.
- Applicant asserts; "an object of the present invention is to provide a disk apparatus including an inexpensive and thin clamp mechanism which is attained by reducing a space required for holding a disk between the turn table and the clamper as much as possible while ensuring a space where the disk inserted can be reliably carried within the disk apparatus." (Specification, p. 4).
